*** ANNOUNCEMENT ***

--File 654 - US published applications from March 15, 2001 to the present are now online. Please see HELP NEWS 654 for details.

--File 581 - The 2003 annual reload of Population Demographics is complete. Please see Help News581 for details.

--File 990 - NewsRoom now contains February 2003 to current records.
File 992 - NewsRoom 2003 archive has been newly created and contains records from January 2003. The oldest months's records roll out of File 990 and into File 992 on the first weekend of each month.
To search all 2003 records BEGIN 990, 992, or B NEWS2003, a new OneSearch category.

--Connect Time joins DialUnits as pricing options on Dialog.
See HELP CONNECT for information.

--SourceOne patents are now delivered to your email inbox as PDF replacing TIFF delivery. See HELP SOURCE1 for more information.

--Important news for public and academic libraries. See HELP LIBRARY for more information.

--Important Notice to Freelance Authors--
See HELP FREELANCE for more information

Main Citation Owner: NLM

Record type: Completed

Inhibition of *bilirubin* *UDPglucuronosyltransferase* activity by triphenylacetic acid and related compounds.

Bilirubin *UDPglucuronosyltransferase* of rat or human liver microsomes was inhibited, in vitro, by triphenylacetic acid and by structurally related arylcarboxylic acids. This inhibition appeared to be competitive...

... progressively increased inhibitory potency. Kappi, bilirubin for triphenylacetic acid was 96 microM compared with 5 microM for 7,7,7-triphenylheptanoic acid. The inhibition of *bilirubin* *UDPglucuronosyltransferase* was not due to displacement of bilirubin from albumin. On the basis of these results an attempt was made to delineate the molecular events leading...

Structure-dependent induction of bilirubin glucuronidation and lauric acid 12-hydroxylation by arylcarboxylic acids chemically related to clofibrate.

Fournel S; Magdalou J; Thomassin J; Villoutreix J; Siest G; Caldwell J; Andre J C

Biochimica et biophysica acta (NETHERLANDS) Oct 17 1985, 842 (2-3)
p202-13, ISSN 0006-3002 Journal Code: 0217513

Document type: Journal Article

Languages: ENGLISH

Main Citation Owner: NLM

Record type: Completed

The inductive potency of carboxylic acids, structurally related to clofibrate, on ***bilirubin* *UDPglucuronosyltransferase*** was investigated in the rat. For this purpose, structure-induction relationships were established using ten different arylcarboxylic or chlorophenoxy-carboxylic acids. 4'-Chlorophenoxyacetic, -propionic and -isobutyric...

... bilirubin (17%, 43%, 60% greater than controls, respectively) after a 5-day treatment in rat (100 mg/kg per day). 2-Phenylpropionic acid also enhanced ***bilirubin* *UDPglucuronosyltransferase*** activity (50%) in contrast to phenylacetic acid. The other compounds did not, or only slightly, affect this parameter. These results indicate that specific structural features...

... different probes embedded in the microsomal membranes. Finally, since the interaction of the carboxylic acids with the membranes did not modify the latency state of ***bilirubin* *UDPglucuronosyltransferase***, it was concluded that the increase in enzyme activity was due more to a real induction than to activation of ***bilirubin* *UDPglucuronosyltransferase***. A close linkage was established between ***bilirubin* *UDPglucuronosyltransferase*** induction and that of cytochrome P-452, as shown by enhanced omega-oxidation of lauric acid. This led to the hypothesis that both processes could...

Record type: Completed

... The substrate specificity of the enzyme was assayed with bilirubin as
a carboxylic acceptor, and phenolphthalein and p-nitrophenol as phenolic
acceptors. Starvation increased the *bilirubin* *UDPglucuronosyltransferase*
* specific activity by 33%, whereas no increase in specific activities
appeared when the phenolic substrates were used. However, on a total liver
weight basis, all three activities were significantly lower than those of
the controls. Kinetic studies of activated microsomal *bilirubin*
UDPglucuronosyltransferase showed that apparent Km values were similar;
fasting acted only by increasing V. The results suggest that the changes in
bilirubin glucuronosyltransferase activity provoked by...

DOCUMENT TYPE: Journal; Article

LANGUAGE: ENGLISH SUMMARY LANGUAGE: ENGLISH

...The esterified/total bilirubin ratio in serum increased, whereas the
bilirubin diconjugates/bilirubin monoconjugates ratio decreased. These
facts, together with the minor reduction of hepatic *bilirubin*
UDPglucuronosyltransferase activity (-12%), suggest that
hyperbilirubinemia would be a consequence of both cholestasis and increased
bilirubin production. The alterations reported here could contribute to the
explanation...
